

REPRESENTANDO CON FIGURAS GEOMÉTRICAS

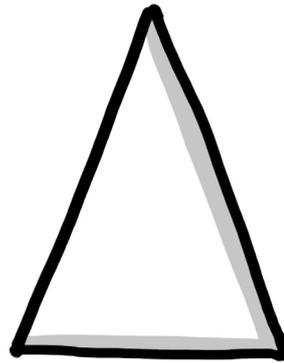

Vivimos rodeados de objetos, pero no solemos detenernos a pensar en su forma. Es momento de poner nuestra atención en ver cuál es la geometría implícita de esos objetos. Esto nos ayudará al momento de representarlos.

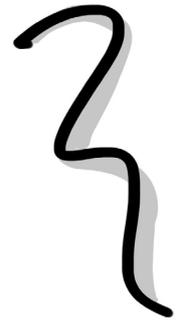

Círculo

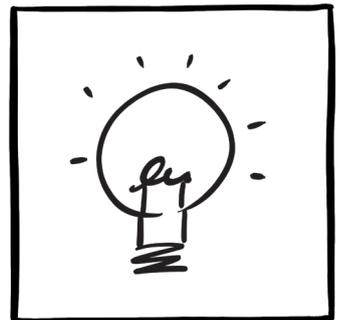

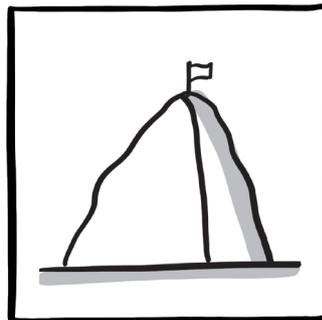

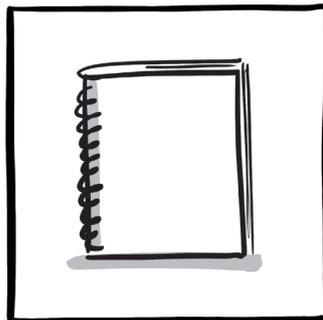

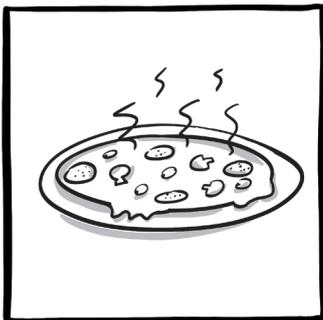

Cuadrado

Triángulo

Línea

Aquí te mostramos algunos ejemplos, verás que la forma geométrica puede ser parte del dibujo que has hecho, no necesariamente el objeto completo y es posible que lo combines con otra forma geométrica o con líneas.

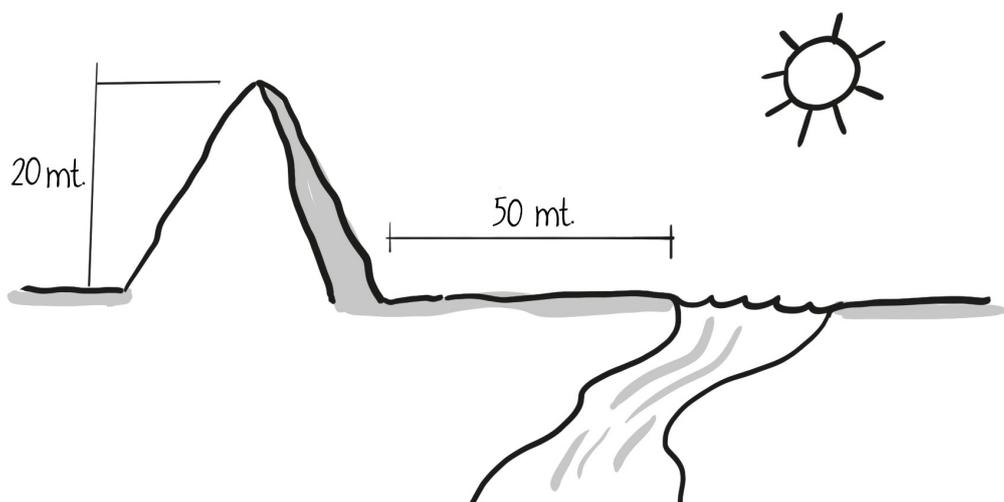

SUGERENCIA PARA HACER EN CLASE

A continuación, hay varias hojas con cuadrantes, previstas para practicar.

Cada alumno recorta sus íconos y se comparan aquellos que se encuentren repetidos, eligiendo el que la clase considera que quedó mejor logrado.

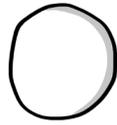

Colocar en una cartelera e ir agregando a lo largo del año todos aquellos nuevos íconos, que vayan surgiendo.

La idea es generar un banco de íconos con los cuales se puede trabajar en clase creando problemas matemáticos o de otras materias.

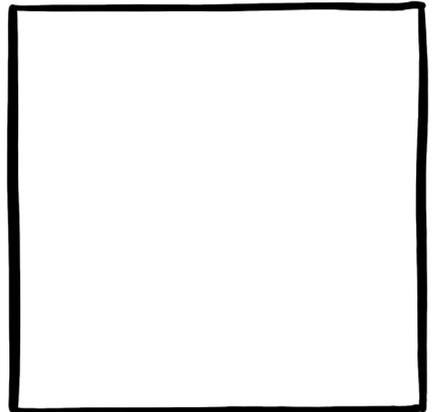

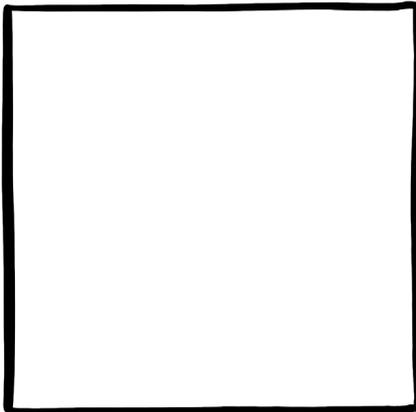

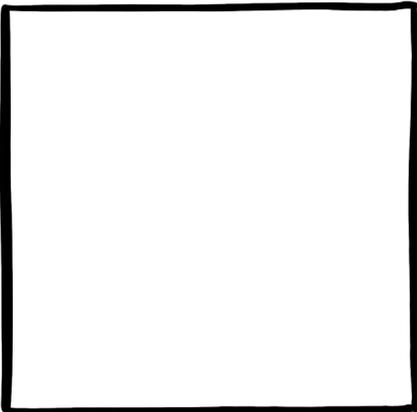

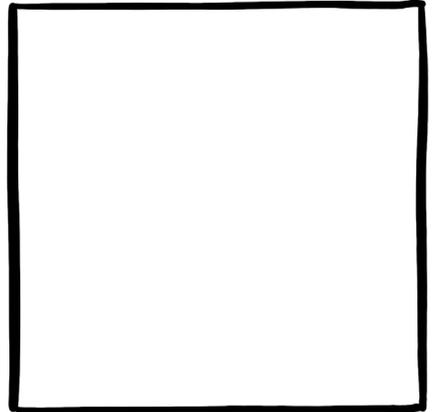

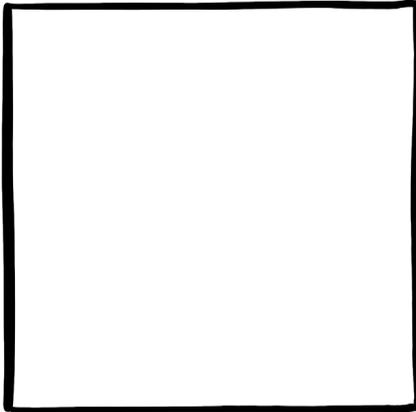

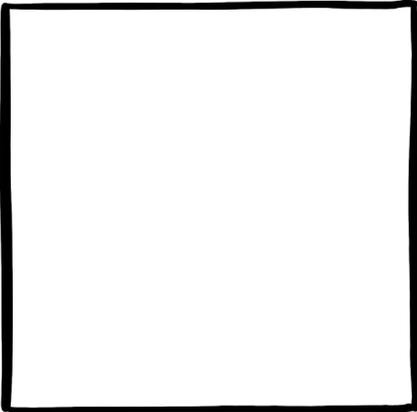

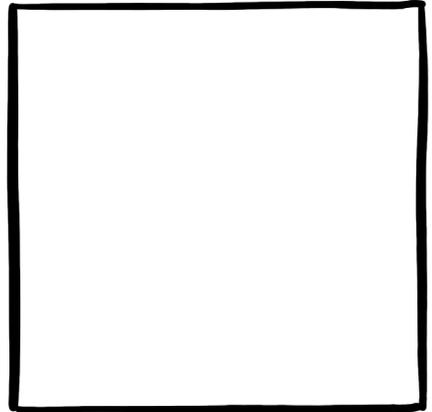

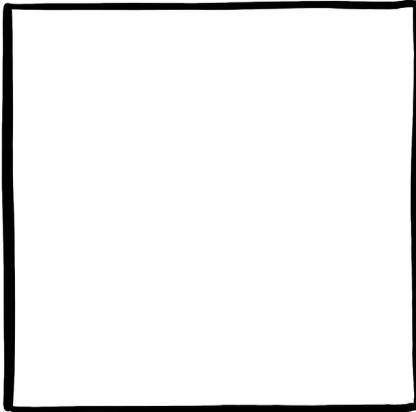

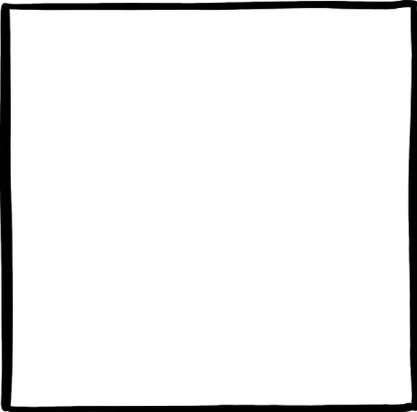

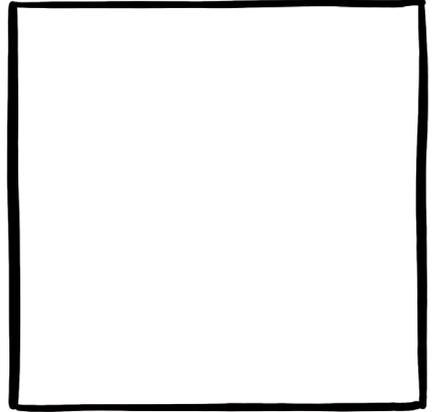

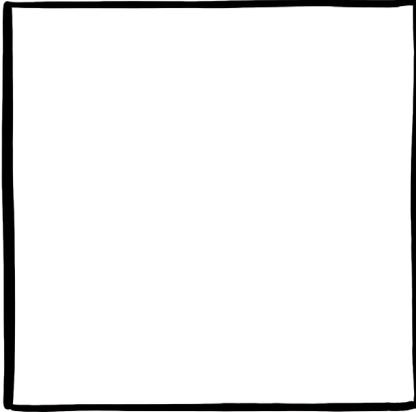

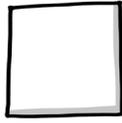

Por ejemplo: La montaña tiene 20 metros de alto y está ubicada a 50 mt. del río...

Ambos elementos podemos dibujarlos mirando los íconos del archivo de la clase y plantear un posible problema a resolver, crear una escena con la información brindada y los datos que sean necesarios, lo que ayudará a comprender la situación.
